Steps to Use - Setup Guide

Project: Auth Server + Admin Dashboard

1. Backend setup (from repository root):
   - python -m venv venv
   - .\venv\Scripts\activate (Windows)
   - pip install --upgrade pip
   - pip install -r requirements.txt
   - python init_db.py
   - uvicorn main:app --host 0.0.0.0 --port 8000 --reload

2. Frontend setup (admin-dashboard):
   - cd admin-dashboard
   - npm install
   - npm run dev

3. Environment checks:
   - Ensure backend API URL is correct for frontend.
   - Ensure backend CORS includes dashboard origin.

4. Login and usage flow:
   - Open dashboard login page.
   - Click Let's Go and choose Password or Smart Card.
   - Use JWT Sessions page to revoke/delete sessions.

5. Troubleshooting:
   - Re-run python init_db.py after schema changes.
   - Verify token/session storage in browser if login fails.
   - Check API connectivity and backend logs for 4xx/5xx.

Notes:
   - This file is generated for quick onboarding.
